

## **# Executive Summary**

### **## Project**

System Capacity & Care Load Analytics for Unaccompanied Children

### **## Purpose**

To evaluate healthcare system load, intake pressure, and capacity stress within the UAC Program.

### **## Key Outcomes**

- \* Developed an interactive analytics dashboard.
- \* Measured total system care load.
- \* Monitored intake-discharge balance.
- \* Identified periods of capacity strain.
- \* Evaluated backlog accumulation trends.

### **## Operational Benefits**

- \* Improved visibility into care demand.
- \* Enhanced staffing and shelter planning.
- \* Supported proactive capacity management.
- \* Enabled data-driven decision-making.

### **## Strategic Recommendations**

1. Increase staffing during high-load periods.
2. Accelerate sponsor reunification workflows.
3. Monitor backlog growth continuously.
4. Expand predictive capacity planning capabilities.

### **## Deliverables**

- \* Exploratory Data Analysis (EDA)
- \* Healthcare Analytics Dashboard (Streamlit)
- \* Executive Summary
- \* Research Paper

### **## Conclusion**

The project provides a scalable analytical framework for monitoring healthcare system performance, supporting humanitarian operations, and improving resource allocation across the UAC care pipeline.
